

It is absurd that the FCC could be 'bought' by lobbyists and convinced that consumers should be denied the ability to receive weather, traffic or other media which WE CHOOSE TO PAY FOR.

It is my understanding that the FCC will consider competitive issues and this clearly is an end run by the traditional media to eliminate competition. If their product was so good satellite radio would not be the fastest growing consumer electronic good in history.

I strongly urge the FCC to reject NAB's petition 04-160
